Connecting Windows Vista to CUWireless

In the start menu click Connect To

Select CUWireless from the list of networks that appears

Choose the Enter/Select additional log on information option

1	Connect to a network	
Ad	ditional log on information is required to connect to this network.	
j	network	
	Enter/select additional log on information	
	✤ Connect to a different network	
		Cance

If your computer is not joined to BLUE you will be prompted for a username/password. Use your NetID and Blue password. You do not need to fill in any domain information

Again, choose the Enter/Select additional log on information option

You will see a dialog box asking to validate the server certificate. Verify that it says "GlobalSign Root CA" and click **OK**

ium Server is is the cor message aç	CA ect certificate, dick OK to connect and ain. Click CANCEL to drop connection.	you will not see
		-

You should see a message that you have successfully connected to CUWireless. You can leave the boxes checked to save this configuration and simply click **Close**

If prompted to set location, select Public location

You are now connected! Click Close and you are done!
